

Beyond Oil: The View from Hubbert Peak

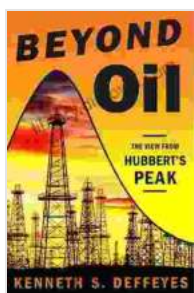

By Kenneth S. Deffeyes

Beyond Oil: The View from Hubbert Peak is a book by Kenneth S. Deffeyes, a geologist and professor emeritus at Princeton University. The

book argues that the world is facing a peak in oil production, and that this will have a profound impact on the global economy and society.

Deffeyes, who died in 2005, was a leading expert on the topic of peak oil. He was one of the first to warn of the dangers of relying on oil as a primary source of energy. In *Beyond Oil*, he presents a comprehensive analysis of the world's oil reserves and production data. He argues that the world has already reached peak oil, and that we are now entering a period of decline.

The implications of peak oil are enormous. Deffeyes argues that we will need to find new sources of energy to replace oil. He also believes that we will need to make significant changes to our economy and society. For example, we will need to reduce our dependence on cars and invest in public transportation. We will also need to find ways to produce food and other goods without relying on oil.

Beyond Oil is a wake-up call for the world. Deffeyes's message is clear: we need to start preparing for a future without oil. The book is a must-read for

anyone who is concerned about the future of our planet.

Reviews

"Beyond Oil is a tour de force. Deffeyes provides a comprehensive and thoroughly documented analysis of the world's oil reserves and production data. His is clear and unequivocal: the world has already reached peak oil, and we are now entering a period of decline."

- James Kunstler, author of The Long Emergency

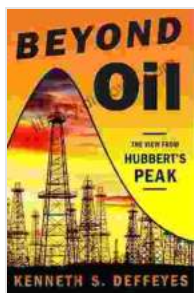

"Deffeyes is a master of the subject. Beyond Oil is a must-read for anyone who is concerned about the future of our planet."

- John Michael Greer, author of The End of Growth
